FACT SHEET

Industrial High-Pressure Nanofiltration Elements

The Industrial NF1 nanofiltration elements feature a D-Series proprietary thin-film membrane to remove low solubility salts and organics from concentrated effluents and brines.

The Industrial NF1 will permeate sodium chloride NaCl and reject the sodium sulfate Na₂SO₄. The Industrial NF1 elements are high pressure elements that can operate up to 80 bar. This salt segregation combined with a high-pressure construction enables production of a pure highly concentrated (> 150 g/L) single salt. The thermal process for Zero Liquid Discharge or Minimum Liquid Discharge projects can greatly be simplified to a crystallizer only, strongly reducing the investment and the operational costs.
